

## 240L WHEELIE BINS A240L-MWB-GB

■ A	1060 mm	■ D	730 mm	■ G	550 mm
■ B	990 mm	■ E	585 mm		
■ C	660 mm	■ F	400 mm		

Measurements to be used as a guide only – variations will occur

### DESCRIPTION

- ▶ 240L Capacity Comingled Bin
- ▶ Red lid with Green Body - General Waste
- ▶ Yellow Lid with Green body - Co-mingled Recycling
- ▶ Blue Lid with Green body - Paper & Cardboard Recycling
- ▶ Resistant to UV degradation
- ▶ Internal concave floor assists emptying
- ▶ Thicker handle for improved control
- ▶ Flexibility in bin and lid markings
- ▶ Safe & Easy to manoeuvre
- ▶ Particularly stable due to external position of wheels
- ▶ Suitable for all DIN lifting equipment
- ▶ Double angle rail for greater safety when emptying
- ▶ Compatible with identification and weighing systems
- ▶ Special ribs prevent containers from becoming jammed when stacked

### DETAILS

#### Cleaning & Maintenance:

See over the page

#### Warranty:

10 Year Limited warranty

#### Certifications:

Manufactured in accordance with AS4123, Certified to International standards for MGBs (EN840)

#### Available Colours:

Colour range to meet 'waste stream' standards  
Standard colours: black, nature green, dark green, grey  
Special colours are available on request\* – com-

#### Options:

## CLEANING AND MAINTENANCE

### Pick a suitable area for washing

- ▶ The perfect time to wash your wheelie bin is during rubbish collection day once it has just been emptied. A sunny and clear day is also desired for drying after washing.
- ▶ It is important to pick an appropriate area to clean your wheelie bin.
- ▶ The area should be big enough to allow the splashing of water and for you to manoeuvre around.
- ▶ You should also consider the disposal of dirty water and harmful chemicals.
- ▶ Ideally, you should be able to let the water flow into a nearby water system such as the main sewer.
- ▶ Make sure that you are not breaking any local regulations in doing so.

### Hose it down and use a mop or broom for scrubbing

- ▶ Tilt the wheelie bin on its side and proceed to use a pressure hose to rinse off any waste on or inside the bin.
- ▶ Using a garden hose works fine too, it definitely helps if it has a high-pressure nozzle.
- ▶ The purpose of this is to remove any debris and make light work before moving on to the heavier duties.
- ▶ If there is any gunk or stubborn debris that is stuck to the base, you can try filling the bin up with 10 cm of water with dishwashing detergent for about half an hour to loosen the material.
- ▶ If this doesn't seem to work then you could try pouring hot or boiling water into the bin.
- ▶ Close the lid and allow the steam to dissolve the gunk.
- ▶ Now that most of the stubborn grime is gone, this will make your work much easier.
- ▶ Use a mop or broom and some dishwashing liquid and scrub the outside and inside of the wheelie bin.

### Cleaning product

- ▶ There is a wide range of cleaning products that you may choose to clean your wheelie bin with.
- ▶ Depending on the condition of your bin, you may require some heavy duty cleaning products such as antibacterial soap or bleach.
- ▶ Always read the label before using liquids with strong chemicals.
- ▶ Something that you should consider is using biodegradable and environmentally friendly products.
- ▶ In some cases, if your rubbish bin is well maintained, then plain soap and water will do the trick.

### Leave it to dry in the sun

- ▶ Once you are satisfied with your new looking wheelie bin, the final step is to leave it outside to thoroughly dry.
- ▶ Dark and damp areas are easy for bacteria and germs to grow.
- ▶ Empty the rubbish bin and flip it upside down to allow any excess water to drip out.
- ▶ Alternatively, you can simply open the lid and leave it out in the sun to air.
- ▶ Once it has dried, use a disinfectant spray such as Dettol Glen 20 to keep your wheelie bin fresh and clean.
